AUNT MARY'S SWEET CORN

We offer this grandest and sweetest of all Sweet Corn on the market.

ORDER EARLY. There is never enough to fill late orders.

Never was sweet corn that tasted as sweet. It will stay in good condition for table use for two or three weeks. It stays in milk so long that natural ripening is impossible; ears that were ready for table use in October were still in milk when hard frost killed the plants in November.

BY ALL MEANS GIVE THIS SWEET CORN A TRIAL THIS YEAR AND YOU WILL COME BACK FOR MORE NEXT YEAR. Make your first planting during May two weeks apart; make another one the second week in June, another the last week in June, and the last planting the first week in July, and this will furnish you sweet green ears until early October.

We have had reports from customers having the ears table use for Thanksgiving. They had made late plantings of seed in June and July.

Per pkt. 25c; 3 for 70c; ½ lb. 80c; 1 lb. \$1.50.

1957 INTRODUCTIONS

CARIBBEAN. The delicate blue tones of this exciting novelty flower undoubtedly have inspired the name that links it to the blue waters of the Caribbean Sea. It is an unusual combination of blue-violet petals, embellished by a rich, deep violet throat and a small cream spear. It opens from 9 to 11 precisely styled florets at one time, placed in formal double rows. Extremely vigorous, Caribbean is good for top performance all the way. Its tall, well-proportioned spikes and distinctly ruffled blue-violet florets should get it top attention at the flower shows.

MAYTIME. A light-hearted charm surrounds this brightly colored glad, reminiscent of the Maytime of young hearts. The gracefully ruffled, deep pink florets contrast pleasingly with the large white throats in each. Maytime is a lithesome glad of good height. It opens 8 to 10 florets on spikes up to 5½ feet tall. It is a robust grower, enjoys wonderful plant health and makes fine, plump bulbs. The taffeta sheen of its texture, and its long ribbon of color make it a remarkable flower for garden, home or exhibition.

1956 INTRODUCTIONS

APPLE BLOSSOM. A gladioli of the utmost delicacy of coloring, the predominating hue being snowy white with a faint touch of cream in the throat and an exquisite flush or corona of cool pink at the edges of the petals. Up to 8 or 10 trimly tailored florets about five inches in diameter and of heavy substance, are open at a time on spikes up to five feet tall. A vigorous, easy grower that performs excellently with only average culture. Apple Blossom will give you a new conception of gladioli beauty when it blooms in your garden. (Plant patent applied for.)

ROYAL STEWART. A very reasonable new gladioli variety that has been widely acclaimed for its consistently fine performance under an extensive test program throughout the United States and Canada. The lightly ruffled florets are five inches in diameter and are of good substance. They are a clear light red and the long flower heads frequently carry up to 12 flowers open at one time. Growth is vigorous and healthy, with the total height of the plants running about five feet. On the occasions when it has been exhibited at gladioli shows, Royal Stewart has proved to be an outstanding winner of top awards. (Plant patent No. 1339).
